3. What methods will be used to ascertain if and how the course has met the category/flag goals?

In addition to the Gen. Ed. Student Survey administered by the registrar's office, I will utilize pre-enrollment and post-enrollment tests. For the Life Sciences Issues designation, I will administer a pre-course enrollment test and an identical post-enrollment test that will query them on scientific principles underlying climate change, the extent to which climate change has and will occur, and solutions to this problem. For the Encountering Global Diversity flag, I will administer a pre-enrollment test and an identical post-enrollment test on the extent to which British vs. Americans citizens are knowledgeable about climate change, the mitigation actions that have been/will be taken by each country, and the possible cultural reasons for any perceived differences.
